CLARITY CONTROL-CLOSE

MetLife – STUDIOS

MakeOffices - Gensler

Sunoco – Francis Cauffman

The stylish way to put an end to slamming doors.

Nello's revolutionary new Clarity Control-Close technology allows sliding doors to close safely and silently. Bouncing, rattling and slamming are no longer issues for our sliding doors as the Control-Close mechanism provides smooth, precise opening and closing. The door automatically brakes itself for the final few inches as it comes to a gentle halt.

- **Quiet:** Ideal for any space where noise reduction is a priority, such as offices, conference rooms and hospitals
- **Safe:** Reduces the risk of accidental closure on users' fingers and toes
- **Easy to use:** Extremely user friendly as the door gently glides into the open/closed position without assistance
- **Durable:** Eliminates the glass damage that occurs from frequent slamming

Clarity Control-Close is packed with innovative features and powerful benefits:

- **Sliding Door Control Close:** Slows door speed as it opens and closes, preventing glass door slam damage
- **Adjustable Anti-Jump Cars:** Sliding cars lock into top track to prevent glass doors from jumping off-track
- **Floor- Mounted Door Guide:** The guide matches the base track height, providing greater door height adjustability and reducing potential door rattle
- **Floor-Mounted Door Guide/Stop:** Guide/Stop provides a positive close to eliminate rattles and allows for precise locking handle alignment
- **Low-Profile Two-Piece Base Track with Two-Pin End Plates:** Additional height adjustment minimizes floor leveling while the two-piece base track allows easy shim access and the end plate pins eliminate accidental dislodging
- **Dry Gasket Seals with Hook Locks:** Dry gaskets lock into tracks to prevent displacement as the door moves
